

Ivermectin prevention helped keep my patients healthy

I'm a nurse but not working bedside anymore. I went into private practice in functional medicine and nutrition coaching 13 years ago. I've had no less than 40 patients of mine or a family member of theirs in the last month get sick. I have Ivermectin prescribed for early treatment or prophylactic treatment. Only one patient started ivermectin on day 5 after a positive test and needed hospital care from post-covid pneumonia. He is home and well now. He has co-morbidities and if he had gotten ivermectin on day 1, I feel certain his story would have been different. Keep up the good work!! The American people deserve to get proper and readily available treatment. It should be OTC!!!!
