

## Ivermectin healed my family after a Spring Break exposure

I had seen Dr. Kory's Senate testimony and immediately I knew he was a trustworthy and dedicated doctor.

My entire family had Covid over Spring Break 2021. My husband and I are over 50 and the kids are 13 and 15. We had been taking Ivermectin and we all suffered nothing more serious than flu-like symptoms. I was the last man standing and I was sure I wasn't going to get a cold because I rarely get sick, but I did. I lost my sense of smell (which was weird) and 3 pounds when I was sick, but I gained both back.

I hope people wake up from this dystopian nightmare and realize what's happening around them! I am always on the look out to refer people to your website with a very light touch. I've sent over a couple of people who have had symptoms of vaccine syndrome after receiving the vaccine.

If anyone deserves the Nobel Prize in medicine it's you at the FLCCC!

Again, thank you! Your integrity, herculean efforts, compassion and bravery have saved lives and is the best of human nature!
