

Travel nurse who has seen ivermectin save many lives

I'm a big advocate of the FLCCC and early treatment and prevention. I am an ICU travel nurse and have seen the horrors of people not getting the treatment they need in the ICU. I would love to help treat people. I have already provided the protocol and ivermectin to 6 family members and friends. They have all survived covid without any issues! I have also sent medication to Canada (hidden in m&m bags) and mailed meds to others across the US. Every life saved is important and I love to do whatever I can to continue helping!

Also, I have been taking ivermectin for the last 5 months prophylactically and I have had a number of close exposures and have never gotten sick! My most recent exposure was a month ago during a 200 mile relay race. I was in a van with a person who tested positive the next day and everyone one else in the van got sick except me, thanks to ivermectin.

Thank you all for all the work you are doing to protect people!
