

Early Treatment Saves Lives

I worked at our local small hospital as a case manager. The hatred of IVM from the hospitalists was mind blowing. Three times I requested use of ivermectin and I was met with "if I gave it to one, then everyone would want it", "do you think you're smarter than the FDA?" "There are no studies to support it." "We only follow what large institutions tell us to do."

I chose to resign because I did not agree with treating patients poorly for their choice to not get a vaccine. I did not agree with the insanity of doing the same thing over and over with death as the outcome. TRY SOMETHING DIFFERENT! As of my last day, our hospital had a 100% failure rate for severe Covid that resulted in intubation. In my heart I believe we could have kept people from even progressing that far.

A handful of doctors have been brave enough to prescribe ivermectin in our area and they are targeted by the hospitalist. Pure evil. Options are to do SOMETHING or do nothing... and despite seeing all the death, the hospitalist still seeks to stop any early treatment.

Early treatment saves lives!!!
