

Our FLCCC Tele-health MD Became our Primary Doctor

Both my husband and I contracted the Delta strain of COVID-19 on November 13, 2021. We had previously been to an FLCCC doctor and had received a prescription of ivermectin along with other supplements. We started taking them all on day 1. My husband received Regeneron on day 5. I waited on getting it, because I have severe drug reactions with numerous drugs. When my illness took a bad turn, my husband was well enough to drive me 90 mins to our FLCCC doctor who added more of the protocol and had given me more ivermectin. My husband took ivermectin at least 10 days and I took it for at least 15 days. My husband also developed Covid pneumonia AFTER Regeneron. I no longer practice as an RN and I was shocked and dismayed at the inept attitude of my former hospital ER.

The bottom line is that I've lost all respect for the medical system and my FLCCC doctor is now my family physician.
