

JANUARY, 2024

TO: FLCCC SUPPORTERS
FROM: FLCCC FOUNDING PHYSICIANS
SUBJECT: *URGENT CALL TO ACTION* — INVESTIGATION INTO THE CRIMINAL SUPPRESSION OF LIFESAVING RESEARCH THAT HAS ALREADY RESULTED IN THE DEATHS OF OVER A MILLION PEOPLE.

Dear FLCCC supporter,

We trust that this message finds you in good health.

We bring to your attention a matter of utmost importance that requires our collective focus and backing.

Dr. G. Umberto Meduri, a founding member of the FLCCC, has initiated a petition on Change.org entitled "**Suppression of Lifesaving Research and the Toll on COVID-19 Patients.**" This crucial petition highlights the relentless efforts of academic, pharmaceutical, and regulatory industries to suppress Dr. Meduri's groundbreaking research—beginning in 20001— on an affordable and effective corticosteroid treatment for acute respiratory distress syndrome (ARDS). ARDS, a life-threatening condition with a 40% hospital mortality rate, affects 200,000 patients in the US annually and is the leading cause of death in both COVID-19 and past viral pandemics.

Top-line facts regarding the intentional destruction of Dr. Meduri's Memphis Lung Research Program (MLRP).

- From 2002-2020, ARDS killed 80 thousand patients each year in the U.S. alone—and ten times that globally. A large percentage could have been saved with corticosteroid treatment—**which was intentionally suppressed.**
- In 2020, COVID-related ARDS killed hundreds of thousands of patients when they could have been saved with early corticosteroid treatment— **which was intentionally suppressed.**
- Early treatment with corticosteroids would have mitigated the social and economic costs of the pandemic. **But it was intentionally suppressed.**
- Progress generated by the MLRP's continued research could have prevented most of this. **But it was intentionally suppressed.**

You can read a more comprehensive brief of these shocking—and verifiable—events [HERE](#).

We encourage you to explore the petition details on the Change.org website and sign the petition [HERE](#). Your active involvement is beyond significant; it is *paramount*.

The breakdown of public institutions responsible for safeguarding medical research integrity and public well-being has had severe consequences on public health, resulting in the unnecessary loss of hundreds of thousands of lives during and before the COVID-19 pandemic. Alongside this institutional failure, pharmaceutical companies' increasing influence and financial power have infiltrated the media, academia, and government. This intersection substantially threatens the scientific community's honest pursuit of cost-effective treatments. **Dr. Meduri's courageous whistleblowing has, unsurprisingly, led to unprecedented retaliation, as discussed in two recent podcasts. (See links below).**

Your signature holds significant power in bolstering our cause. Furthermore, we encourage you to share this information within your network to foster broad-based support. **By adding your signature and spreading the message** of this petition, you become a crucial force in addressing an urgent public health concern—the imperative to **investigate actions that have resulted in countless unnecessary deaths and a global economic collapse.**

In the current landscape, the integrity of medical research is under threat, hindered by external influences that obstruct the pursuit of unbiased and groundbreaking discoveries. Your support actively contributes to a movement dedicated to prioritizing the well-being of individuals and breaking free from the constraints of academic politics and pharmaceutical pressures. Your signature will save lives.

Trusting in your support,

The FLCCC founding members and the entire FLCCC team

Paul E. Marik MD, FCCM, FCCP

Pierre Kory MD, MPA

G. Umberto Meduri MD
